(a) Repeat share (in-context symbols)
pool g (from model g-1)
model g on real data
Share
Generation
(b) Spread of share across sequences
observed
generalise (no drift)
memorise (Wright-Fisher)
from model g-1's q
Variance
Generation
(c) Uneven preference of model g: Var(q)
Variance
Model generation
(d) Memorisation and persistence
memorisation: q vs own training share
persistence: q vs previous model q
Correlation
Model generation
